SVDB 1809 No  
SVDB 2222 Yes  
SVDB 2225 Yes - Question

-----

SVDB 1339 Yes  
SVDB 1345 Yes  
SVDB 1583 Yes - Question - but could someone give an example of what engineers were trying to do with hierarchical referencing of imported identifiers?? (What did engineers think they could do??)

SVDB 1809 No

I am not really opposed but I want to know if the following case is covered by the text:

```
package p;
  function void f();
    $display("p::f");
  endfunction
endpackage

package p2;
  function void f();
    $display("p2::f");
  endfunction
endpackage

module top;
  import p::*;

  if (1) begin : b          // generate block
    initial f();          // reference to "f" ? still causes import of p::f?
    function void f();
      $display("top.b.f");
    endfunction
  end

  import p2::f; // does this cause an error??
endmodule
```

SVDB 2222 Yes  
SVDB 2225 Yes - Question - Is "design unit scope" defined somewhere?
